New WEBTech Notes Enhancements Released

In January GPO completed a massive cleanup of WEBTech Notes records. At the same time GPO staff developed enhancements to WEBTech Notes, which were based on comments received from the depository library community. GPO staff now work directly in the application to add and modify records, and the following features were added to WEBTech Notes:

1) The default search/browse interface (as well as all search results) now displays the status field. Users can immediately see which records are new and which are modified.
2) The advanced search was reconstructed to provide searching by any combination of date or date range, category or categories, and fields.
3) To alert users of new and modified records, an RSS feed button was added to the default search/browser interface.

Use **WEBTech Notes** and subscribe to the RSS feed.
